16. ABSTRACT

This report provides data on the use of sanitary landfills (Subtitle D facilities) for hazardous waste disposal in Florida by small quantity generators. It consists of eleven parts including a part called Study Area Data which contains the data aggregated across the counties covered in the report, and ten parts containing data at the individual county level for all 67 counties in Florida. Each county is described in terms of location, economic profile, and demographic characteristics. In addition, information is provided on permitted sanitary landfills that are currently active in Florida. This report contains survey data from approximately 19,000 hazardous waste generators that reside in 514 industries identified by four-digit Standard Industrial Classifications codes. The hazardous waste data are cross-tabulated and displayed in the following seven configurations: types of waste generated (26 types); management methods used (14 methods); types of wastes disposed in sanitary landfills; SIC generating waste; types of waste generated by SIC; management methods used by SIC; and waste types by SIC by management method. The last cross-tabulation consists of 14 sub cross-tabulations, i.e., one for each management method. There are identical sets of crosscounty data (i.e., each county has a set of 7 cross-tabulated tables.)

The information in this document has been funded wholly or in part by the U.S. Environmental Protection Agency under Grant No. CR-813151010 to the Florida State University. It has been subject to the Agency's peer and administrative review and it has been approved for publication as an EPA document. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

FOREWORD

This research was conducted in order to provide information to the U.S. Environmental Protection Agency that relates to the use of RCRA Subtitle D facilities by small quantity generators of hazardous waste. One area of concern that relates to RCRA Subtitle D facilities is the effectiveness of monitoring programs at these facilities. An important component in assessing monitoring programs at RCRA Subtitle D facilities is the data on the composition of wastes managed at these facilities. The purpose of this report is to provide to the EPA data on small quantity generator hazardous waste that is managed at RCRA Subtitle D facilities in the State of Florida, with a particular emphasis on sanitary landfills.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for those counties included in each of the first ten parts of the report. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The specific counties that are included in Parts I-X of the report are the following:

Part I: Alachua, Baker, Bay, Bradford, Brevard

Part II: Broward, Calhoun, Charlotte, Citrus, Clay, Collier

Part III: Columbia, Dade, De Soto, Dixie, Duval

Part IV: Escambia, Flagler, Franklin, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hardee, Hendry, Hernando, Highlands

Part V: Hillsborough, Holmes, Indian River, Jackson, Jefferson, Lafayette

Part VI: Lake, Lee, Leon, Levy, Liberty, Madison, Manatee, Marion

Part VII: Martin, Monroe, Nassau, Okaloosa, Okeechobee, Orange

Part VIII: Osceola, Palm Beach, Pasco, Pinellas

Part IX: Polk, Putnam, St. Johns, St. Lucie, Santa Rosa, Sarasota, Seminole

Part X: Sumter, Suwanee, Taylor, Union, Volusia, Wakulla, Walton, Washington

ABSTRACT

This report contains data from all of the 67 counties in the State of Florida, and from over 19,000 small quantity hazardous waste generators. Most of the firms and agencies providing hazardous waste data included in this report are small quantity hazardous waste generators as defined in the RCRA regulations. These data are displayed according to 26 waste types, 14 waste management methods and 514 industries as defined by four-digit Standard Industrial Classification codes. This report contains individual county data for each of the 67 counties in the State of Florida summarized and presented by these waste types, waste management methods, and Standard Industrial Classification codes. This report also contains statewide data aggregated across all of the 67 counties in the State of Florida by these waste types, waste management methods, and Standard Industrial Classification codes.

These data indicate that there are approximately 129,000 tons of small quantity generator hazardous waste produced annually in the State of Florida. Approximately 35 percent of these wastes are recycled, while approximately 23 percent of these wastes are disposed in sanitary landfills in the State of Florida.

In terms of weight, the major types of waste disposed in sanitary landfills are "Waste Oils, Lubricants" (45 percent), "Lead-Acid Batteries" (12 percent), "Spent Solvents" (11 percent), and "Sludges with Heavy Metals" (5 percent). Even though waste oils are not regulated as a hazardous waste under the RCRA, they were included in the county-level surveys conducted in the State of Florida.

Counties in the State of Florida are relatively diverse in terms of geography, population size and growth, and economic activities. As such, these Florida data on small quantity generator hazardous waste are generally representative of the types and quantities of these wastes produced, and the management practices used, nationwide by small quantity hazardous waste generators.

SECTION 1

INTRODUCTION

The 1984 Hazardous and Solid Waste Amendments to RCRA require the U.S. Environmental Protection Agency (EPA) to complete a study of the adequacy of the current Subtitle D programs in the States and to report to Congress within 36 months of enactment of the amendments. The study is to evaluate the current criteria regarding protection of public health and the environment from problems associated with groundwater contamination. The study is to include a detailed assessment of the adequacy of groundwater monitoring programs at Subtitle D facilities, as well as a recommendation to Congress concerning what enforcement authorities are needed to properly implement the program.

After completion of this study, the EPA is to revise, where necessary, the criteria for facilities that receive household and small quantity generator hazardous waste. The revisions are to include all steps necessary to protect human health and the environment. The amendments specify that, at a minimum, the revisions should require groundwater monitoring as necessary to detect contamination. Information on the types and quantities of hazardous waste typically entering the Subtitle D facilities is important in order to properly design monitoring systems to detect contamination. The 1984 RCRA amendments require the states to adopt and implement Subtitle D permitting programs that are to be approved by the EPA, or that are equivalent or similar to the federal program as defined by current or revised criteria.

An important component in assessing groundwater monitoring programs at Subtitle D facilities is the acquisition of data on the composition of wastes managed at these facilities. The purpose of this report is to provide the EPA with data on potentially hazardous waste generated and managed in the State of Florida, as well as with information on sanitary landfills in Florida. The sanitary landfills described in the study are those that reside in the counties that have provided the hazardous waste generation and management data.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for all 67 counties in the State of Florida and, as a result, cover the hazardous waste management activities of small quantity generators for the entire State of Florida. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The counties are listed in alphabetical sequence within each of the first ten parts of the report. The specific counties that are included in each part of the county data (Parts I-X) are specified in the Foreword (p. iii).

SECTION 2

METHODOLOGY AND STUDY AREA

METHODOLOGY

The data contained in this report on hazardous waste generation and management, and sanitary landfills were acquired from the Florida Department of Environmental Regulation (FDER). The hazardous waste data were collected as part of a statewide local government hazardous waste assessment program administered by the FDER. These data have been compiled to assist the EPA in evaluating facilities (sanitary landfills) regulated under Subtitle D of the RCRA so that appropriate groundwater monitoring programs can be established at these facilities. The data contained in this report will assist the EPA in defining the problems associated with hazardous waste disposal in sanitary landfills and with other management methods used by small quantity generators of hazardous waste. In addition, these data can provide information that the agency can use in determining the regulatory status of waste oil in the context of the RCRA concerns.

The data are presented in tabular form by amount, type, waste management method, and Standard Industrial Classification (SIC) code. Waste amounts are in units of pounds for the county data (Parts I-X) and in units of tons for the study area aggregated data (Part XI). There are (26) waste types and (14) waste management methods into which the data are arranged. In addition, there are 514 four-digit Standard Industrial Classification codes into which the data have been cross-tabulated and arranged.

It should be noted that an initial list of approximately 400 SIC codes was prepared by the FDER, and this list was used by the counties in identifying potential generators of hazardous waste. The number of SIC codes for which data are presented in this report reflects the SIC codes actually reported by the potential generators responding to the survey. Some survey respondents, for example, changed the SIC code on the survey form sent to them, to an SIC code that more closely reflected the primary activity of the firm as judged by the respondent. The changing of SIC codes by survey respondents resulted in SIC codes that are not on the initial FDER list, but are, nevertheless, contained in this report. As a result, the total number of SIC codes for which data are presented in this report is 514.

The county level data were provided by the FDER and merged into a single data file for computer manipulation. Due to the decentralized way that the data were collected, keypunched, and coded, some deficiencies exist in the data and should be noted. First, Bay, Broward, Dade, Escambia, Monroe, Okaloosa, Santa Rosa, and Walton counties utilized a waste management category called "Picked Up by a Private Hauler." When these data were processed by the counties, they were coded into the category "City, County, or Private Hauler Takes Waste to the Landfill." Although unknown, it may be that some of these wastes were recycled or managed in ways other than disposal in sanitary landfills. A significant amount of these wastes are waste oils, lead-acid batteries, spent solvents, and empty pesticide containers. This coding procedure over-estimates the amount of waste managed at sanitary landfills in these counties.

Second, De Soto, Hardee, Highlands, Okeechobee, and Polk counties also utilized a waste management category on their survey form called "Picked Up by a Private Hauler." However, in this case, these counties did not specify where this material was taken for ultimate management, whereas, in the previous case, it was assumed that all waste that was reported picked up by a private hauler was, in turn, taken to a sanitary landfill. Wastes reported managed in this category for these counties have been consolidated into the waste management category "Other" in this report. Much of the wastes reported managed by this method are wastes that typically have secondary market value (e.g., waste oils, lead-acid batteries, spent solvents, and empty pesticide containers). It is likely that some of these waste were ultimately recycled. It is not possible to determine the ultimate management fate of wastes reported in this category on the survey forms. The use of the category "Picked Up by a Private Hauler" under-estimates the amounts and types of waste managed at sanitary landfills for these counties.

Upon examining the data in terms of the waste types generated by Standard Industrial Classification (SIC) codes, some anomalies have been identified. These anomalies relate to the reported generation of, for example, dry cleaning filters, waste explosives, and photographic wastes by industries that typically would not generate these types of wastes (e.g., Plumbing, Heating and Electrical Establishments, Gasoline Service Stations, Boat Building and Repair Shops, Trucking Companies, General Automotive Repair Shops, Reupholstery and Furniture Repair Shops, Motor Vehicle Dealers and Automobile and Home Supply Stores). The presence of these anomalies in the data does not significantly affect the overall distributions of waste types generated or waste management methods reported used by generators participating in the assessments. As with any large, decentralized data base, it is anticipated that errors relating to respondent accuracy, coding and keypunching have occurred.

The data relating to sanitary landfills in the study area were obtained from the FDER. The FDER maintains a data file on all sanitary landfills in the State of Florida. The data in the FDER file are for all classes of landfills, and for landfills that are closed, inactive, or active. The data presented in this report are only for landfills that are in use (i.e., permit status: active) and of Class I, II, or III.

Sanitary landfill facility classes are defined by the FDER as follows:

Class I Landfill	Landfill receiving some putrescible waste or garbage with total disposal in excess of 20 tons or 50 cubic yards (compacted) per day. Daily cover is required.
Class II Landfill	Landfill receiving some putrescible waste or garbage with total disposal of less than 20 tons or 50 cubic yards per day. Minimum cover is once every four days.

Class III Landfill	Landfill receiving only non-putrescible waste (i.e., trash, demolition and construction debris, yard trash, etc.). Minimum cover requirement is once per week.

The data file maintained by the FDER consists primarily of information contained in the facility permit, as well as a historical log of permit activities, including operational deficiencies at the facility. Printouts of each of the 160 active sanitary landfills that are in the 67 counties in the State of Florida are contained in Appendix D of Part XI of the report (Study Area Data), and definitions of the facility profile codes used in the FDER printouts are contained in Appendix E of Part XI of the report (Study Area Data).

In the appendices of Parts I-X of the report (County Data), there are displays that contain 21 summary characteristics for each active sanitary landfill in the State of Florida. These summary characteristics have been extracted from the facility printouts contained in Appendix D of the Study Area Data.

STUDY AREA

The study area for this report is the entire State of Florida including all 67 counties and is shown in Figure 1. Florida counties are diverse in terms of population, location, and economic profile. These counties consist of: highly populated, urban areas; areas with relatively low population or rural areas; coastal and non-coastal areas; relatively industrialized areas with varied manufacturing activities; and, areas that are relatively non-industrialized. In the appendices of Parts I-X of the report (County Data), each county is briefly described in terms of location, population, and economic activities occurring in the county.

SECTION 3

HAZARDOUS WASTE GENERATOR DATA AND CHARACTERISTICS OF SANITARY LANDFILLS

HAZARDOUS WASTE GENERATOR DATA

The hazardous waste generator data for the counties included in this part of the report are presented in the Appendices of this part. These data provide information on the hazardous waste generation and management practices of smaller hazardous waste generators in these counties, particularly as they relate to the use of sanitary landfills for disposal of these wastes.

The county hazardous waste data included in this report are presented in the following displays:

- Types and Amounts of Hazardous Waste Generated Annually;
- Hazardous Waste Management Practices;
- Hazardous Waste Disposed in Sanitary Landfills Annually;
- Hazardous Waste Generated by Standard Industrial Classification Code;
- Hazardous Waste Types Generated by Standard Industrial Classification Code;
- Hazardous Waste Management Methods Used by Standard Industrial Classification Code; and
- Hazardous Waste Types Generated by Standard Industrial Classification Code by Management Method.

All hazardous waste data included in the report were collected as survey data under the Florida Local Government Hazardous Waste Assessment Program. A major goal of the Florida Local Government Hazardous Waste Assessment Program is to address the problems associated with hazardous waste mismanagement, particularly as this mismanagement relates to smaller quantity generators. This program requires all counties in the State of Florida to conduct assessments of hazardous waste related activities in their jurisdictions using guidelines developed by the Florida Department of Environmental Regulation (FDER). One component of the county assessments consists of a survey of hazardous waste generators. Generators in each county were identified using a list of approximately 400 Standard Industrial Classification (SIC) codes. This SIC list was assembled initially by the EPA Office of Solid Waste for use in its national survey of small quantity generators. The EPA list was subsequently expanded to include firms that are of particular significance to the State of Florida (e.g., Boat Building and Repair), as well as to include those firms that are involved with the production or use of waste oil. Although waste oils are not regulated as a hazardous waste under the RCRA, waste oils were included in the State of Florida surveys.

The survey data were collected utilizing questionnaires sent through the mail and on-site interviews. All county data were intended to be made available to the FDER in a predetermined format so that the data could be merged into regional assessments, as well as a statewide assessment of hazardous waste generation and management practices.

All counties in the State of Florida received funding from the state to complete the surveys. The funding received by the counties was based upon population. The surveys were conducted under a variety of agreements involving county governments, regional planning agencies, private consultants, and combinations of these entities. For example, some counties conducted their own surveys while utilizing a consultant to process the data, while some of the larger counties completed all aspects of the survey in-house. The result was the collection of data through a number of individual but coordinated efforts.

The waste generation and management data consist primarily of responses from small quantity hazardous waste generators. However, some of the county data are not separated by large quantity generator data and by small quantity generator data. Overall, the portion of large quantity generator waste in these data is not significant.

CHARACTERISTICS OF SANITARY LANDFILLS IN THE STATE OF FLORIDA

This report contains information on sanitary landfills that are receiving potentially hazardous wastes. The characteristics of these sanitary landfills were obtained from the FDER. These data have been extracted from the facility permits and are maintained by the FDER in a facility data file (data file: GMS 25). Individual facility printouts for all active sanitary landfills in the State of Florida are contained in Appendix D of this part of the report (Part XI). Corresponding landfill characteristics for the 160 individual active sanitary landfills in the State of Florida are contained within the appendices of Parts I-X (County Data) of the report. The sanitary landfill information is summarized and displayed in tabular form, and is constructed from a list of twenty-one characteristics. These sanitary landfill characteristics are:

- Class of Landfill
- Responsible Authority
- Design Capacity
- Population Served
- Disposal Method
- Waste Types Accepted
- Land Owner
- Disposal Acreage
- Waste per Day Accepted
- Total Acreage
- Landfill Type
- Years in Operation
- Gas Control Used
- Cell Depth
- Depth to Water Table
- Soil Permeability
- Liner Material
- Number of Monitoring Wells
- Approved GW Monitoring Plan
- Adjacent Land Use
- Number of Surface Monitoring Points

APPENDIX A:

Hillsborough County

HILLSBOROUGH COUNTY

Hillsborough County, shown in the following figure, is located at the center of the Florida west coast and borders Tampa Bay. It is comprised of 1,053 square miles. It is a predominantly urban county, dominated by the City of Tampa. In 1970, the population of Hillsborough County was 490,265, while the population in 1983 was 693,152. The population in 1990 is estimated to be 796,500, and this growth represents a 23 percent increase over the population in 1983, making it one of the fastest urban growth areas in the state. The population density for the county in 1983 was 658 persons per square mile. This ranks Hillsborough County sixth in population density among Florida's sixty-seven counties.

Tampa, with its port facilities, is the largest city in the county with a 1983 population of 274,336. Plant City is the second largest incorporated town with a 1983 population of 17,403. Temple Terrace is the third largest town with 11,404 residents.

Total employment in Hillsborough county was 307,565 in 1983. The largest category of employment was Services with 94,117 employees representing 31 percent of the total. Retail Trade was the second largest category of employment for Hillsborough County with 58,124 or 19 percent of the total. Manufacturing was the third largest employment sector in the county contributing 12 percent of the total. Manufacturing was followed by Wholesale Trade, and Transportation, Communication, and Public Utilities at 9 percent and 8 percent respectively. The Finance, Insurance, and Real Estate sector contributed 7 percent to total employment with 21,914 employees. All other categories of employment contributed six percent or less to total employment.

In Hillsborough County there are three active landfills, the Southeast County Sanitary Landfill (Class I), the Northwest Hillsborough Landfill (Class III), and the Kingway Road Landfill (Class III). The trench method is used at the Southeast County Sanitary Landfill. The groundwater monitoring plan for this site was approved in March 1984, however in August of 1984, damage to monitoring wells was detected by the FDER. Disposal at the Northwest Hillsborough Landfill is limited to construction debris, and disposal at the Kingway Road Landfill is limited to shredded or milled auto parts consisting of plastic, rubber, and fiber.

APPENDIX B:

Holmes County

HOLMES COUNTY

Holmes County, shown in the following figure, is located in the Florida Panhandle and is 488 square miles in area. It is primarily a rural county, and is one of the least populated counties in the state. The 1970 population was 10,720. In 1983, the population was 15,106, and is expected to increase by 13 percent to 17,000 by 1990. The largest incorporated city in Holmes County is the city of Bonifay with a 1983 population of 2,562.

Total employment for Holmes County is 2,598. Services is the largest employment sector representing 37 percent of the the total workforce. Manufacturing is the second largest sector (28%) and Retail Trade is ranked third (15%). Government employment contributes 7 percent of total employment for the county. The remaining employment sectors account for 5 percent or less of total employment for Holmes County.

There is one active landfill in Holmes County, the Class I Holmes County Sanitary Landfill. The trench method is used at this site and both the cell depth and the depth to the water table are approximately 10 feet. A study by the Northwest Florida Water Management District reports inadequate monitoring and ineffective drainage at this site. In addition, one of the four monitoring wells at the landfill is reported to be dry.

APPENDIX C:

Indian River County

INDIAN RIVER COUNTY

Indian River County, shown in the following figure, is located in the east central portion of Florida along the Atlantic coastline. The area of Indian River County is 549 square miles. Indian River County is an urban and tourist-related area, and also is an important citrus producing area in Florida. The major city in Indian River County is Vero Beach with a 1983 population of about 16,700. The 1970 population of the county was 35,990, while in 1980, the population had risen to about 60,000. In 1990, the population of Indian River County is estimated to be 92,400.

Due to its heavy dependence on tourism and citrus production, the main employment sectors in Indian River County are Services (28%) and Agriculture (14%). Manufacturing, Construction, and Finance, Insurance, and Real Estate each contribute about 8 percent of all jobs in the county.

In Indian River County there is one active landfill, the Indian River County Landfill (Class I). In 1980, this site was listed as an open dump but has since been permitted. The groundwater monitoring plan for the Indian River County Landfill was approved by the FDER in April of 1985. The water table at this facility is near the surface at this site, and 3.5 to 5 feet of fill must be applied to the cells in order to meet the requirements of a minimum distance of 5 feet between the waste and the groundwater.

APPENDIX D:

Jackson County

JACKSON COUNTY

Jackson County, shown in the following figure, is located in the northwestern portion of the state along the borders of Georgia and Alabama. Jackson County is approximately 940 square miles in area. In 1970, the population of Jackson County was 34,400 and in 1983 the population was 39,500. In 1990 the population of Jackson County is projected to increase to approximately 44,000.

The largest employment sector in Jackson County is Services, contributing about 30 percent of all jobs in the county, while Manufacturing contributes about 18 percent of all jobs in the county. The Retail Trade and Government sectors contribute 16 percent to total employment in the county. Wholesale Trade contributes 8 percent to total employment in Jackson County. The remaining jobs are contributed by all other sectors in the county.

There are two active landfills in Jackson County called the Jackson East Sanitary Landfill (Class I facility) and the Jackson West Sanitary Landfill (Class I facility). Both facilities are publicly-owned and operated. The Jackson East facility is eighty acres in size and began operating in 1977. This facility has a clay liner and three groundwater monitoring wells. The soil permeability at the site is reported to be approximately four inches per hour. The average cell depth at the Jackson East facility is six feet and the depth to the water table is not included in the permit record.

The Jackson West facility is eighty-five acres in size and began operating in 1984. The facility is estimated to have 14 years of remaining capacity. There are four groundwater monitoring wells at the facility and one surface water monitoring point. There is not data on liner type, soil permeability, average cell depth, or depth to the water table in the permit record.

APPENDIX E:

Jefferson County

JEFFERSON COUNTY

Jefferson County, shown in the following figure, is located in the northcentral portion of the state along the Georgia border. Jefferson County is approximately 610 square miles in area. It is predominantly agriculturally oriented although there is some commercial lumber production occurring in the county. In 1970, the population of Jefferson County was 8,800 and in 1983 the population was 11,200. In 1990 the population of Jefferson County is projected to approach 13,000.

The largest employment sector in Jefferson County is Services, contributing about 27 percent of all jobs in the county, while Manufacturing and Agriculture both contribute about 15 percent of all jobs in the county. The Government and Transportation, Communication, and Public Utilities sectors each contribute about 7 percent of total employment in the county. The remaining jobs are contributed by all other sectors in the county.

There is one active landfill in Jefferson County called the Jefferson County Sanitary Landfill or the Capps Sanitary Landfill (Class II facility). The Capps facility began operating in 1980 and has an estimated 19 years of remaining capacity. The facility is 35 acres in size. The facility is unlined, has one groundwater monitoring well and one surface water monitoring point. The average cell depth is four feet and the depth to the water table is approximately 35 feet.

APPENDIX F:

Lafayette County

LAFAYETTE COUNTY

Lafayette County, shown in the following figure, is located in the northcentral portion of the state. Lafayette County is approximately 555 square miles in area. It is predominantly an agriculturally oriented county, and is one of Florida's smaller counties both in geographic size and population. In 1970, the population of Lafayette County was 2,900 and in 1983 the population was 4,200. In 1990 the population of Lafayette County is projected to approach 5,500.

The largest employment sector in Lafayette County is Services, contributing about 41 percent of all jobs in the county, while Government contributes about 19 percent of all jobs in the county. Agriculture contributes approximately 13 percent to total employment in the county. The remaining jobs are contributed by all other sectors in the county.

There are five active landfills in Lafayette County called the Central Lafayette Sanitary Landfill, the Day Dump or Sims Farm Landfill, the Edwards Sanitary Landfill, the Ephesus Sanitary Landfill, and the Kent Landfill. All of these five landfills are Class II facilities, and all are publicly-owned and operated. The Central facility is 20 acres in size, and began operating in 1977. This facility is estimated to have 14 years of remaining capacity. The facility is unlined and has two groundwater monitoring wells. The soil permeability at the site is approximately 6 inches per hour. The average cell depth is ten feet, and the depth to the water table at the site is approximately ten feet.

The Sims Farm facility is 20 acres in size, and began operating in 1977. The facility is unlined and has one groundwater monitoring well. The depth to the water table at the site is approximately ten feet. Data on soil permeability and average cell depth was not available in the permit record.

The Edwards facility is nine acres in size and began operating in 1980. The facility is unlined and has one groundwater monitoring well. The average cell depth at the facility is 15 feet and the depth to the water table is approximately 30 feet. There are 5 shallow private water supply wells within one mile of the site and 4 private residences within 1,000 feet of the site.

The Ephesus facility is five acres in size and began operating in 1977. The facility is unlined and has one groundwater monitoring well. The average cell depth at the facility is reported to be ten feet and the depth to the water table is also ten feet. Soil permeability at the site is approximately 20 inches per hour.

The Kent facility is six acres in size and began operating in 1978. This facility is unlined and has one groundwater monitoring well. The depth to the water table is approximately ten feet, and the soil permeability at the site is approximately 20 inches per hour. Data an average cell depth at the Kent facility was not available in the permit record.

DEFINITIONS OF FACILITY PROFILE CODE

1. Class
   1. = Class I Landfill
   2. = Class II Landfill
   3. = Class III Landfill

2. Responsible Authority
   1. = Public
   2. = Private

3. Design Capacity (tons/day)

4. Population Served

5. Disposal Methods
   1. = Burial
   2. = Burial and Impoundment
   3. = Burial and Surface Water Discharge
   4. = Burial and Volume Reduction/Resource Recovery
   5. = Burial, Impoundment and Surface Water Discharge
   6. = Burial, Impoundment and Volume Reduction

6. Wastes Types

   105 = Solid Non-hazardous/Agricultural Waste
   110 = Solid Non-hazardous/Residential Waste
   115 = Solid Non-hazardous/Commercial Waste
   120 = Solid Non-hazardous/Hospital Waste
   130 = Solid Non-hazardous/Industrial Waste
   200 = Sludges
   205 = Water Treatment/Lime Softening Sludge
   210 = Septic Tank Sludge
   225 = Domestic Sewage Sludge
   230 = Incinerator Residue Waste
   905 = Caustic and Acid Waste
   945 = Pathological/Infectious Waste
   999 = Other Wastes

   (Waste Type Combination)

   2. = 110
   3. = 115
   4. = 130
   5. = 105,110
   6. = 115,130
   7. = 105,110,115
   8. = 105,115,130
